3100J Knight Hall

College Park, MD 20742

RESEARCH INTERESTS

My research interests encompass computational journalism and social media sensing. Automated fact-checking and information quality measurement are my current research focus.

EDUCATION

Ph.D. in Computer Science. University of Texas at Arlington 2016

- Dissertation Title: Toward Automated Fact Monitoring and Checking. [O1]

B.S. in Computer Science. Bangladesh University of Engineering & Technology 2009

PROFESSIONAL EXPERIENCE

Assistant Professor. University of Maryland, College Park August 2019 – Present
Directing the Computational Journalism laboratory (*cjlab*). Developed the following courses.

JOUR 479/779 Computational Journalism Fall 2019

INST 767 Big Data Analytics Spring 2020

Assistant Professor. University of Mississippi August 2016 – August 2019

Directed the Data Exploration and Research laboratory (*dear.lab* <https://dear.cs.olemiss.edu>).

Developed the following courses.

Engr 691 Advanced Topics in Natural Language Processing Fall 2018

CSci 582 Computational Journalism Spring 2019, Spring 2017

CSci 543 Data Mining Spring 2018, Fall 2016

CSci 517 Natural Language Processing Fall 2018

CSci 444 Information Visualization Fall 2017

CSci 387 Software Design & Development Spring 2019, Spring 2018, Spring 2017

Research Associate. Qatar Computing Research Institute (QCRI) March 2013 – August 2013

Analyzed the community and conflict detection problem in friend-foe network. It has many applications in social network analysis. Developed a probabilistic algorithm to solve the problem and validated its efficacy using Twitter data and Correlates of War data.

Network Planning & Engineering Intern. AT&T May 2012 – August 2012

Maintaining voice call quality is a key concern for AT&T. Knowing the source (indoor/outdoor) of voice calls helps to reduce troubleshooting cost. I analyzed AT&T's voice call data, identified critical features and developed a prediction model to determine indoor/outdoor status of a voice call. The method has been patented.

Course Instructor. University of Texas at Arlington

CSE 4335/5334 Data Mining Fall 2014

Graduate Research Assistant. University of Texas at Arlington Fall 2015–Summer 2016

Graduate Teaching Assistant. University of Texas at Arlington Fall 2010–Spring 2014

Lecturer. Daffodil International University, Bangladesh Spring 2010 – Summer 2010

- **Computational Journalism**

Clickbait Practice in the Media [C19, C26, C25]: The term clickbait refers to a form of web content that employs writing formulas and linguistic techniques in headlines to trick readers into clicking links, but does not deliver on its promises. The purpose of this project is to **i)** develop computational techniques to understand the extent of clickbait usage by mainstream and non-mainstream media, **ii)** model users' clicking behavior with respect to clickbait, **iii)** and design algorithms to reduce the harmful effect of clickbait in social media.

Automated Fact-checking [C3, C22, C23, C27, C28, C30, O2]: Journalists spend a lot of time fact-checking claims made by politicians. I am developing an automated live fact-checking platform named **ClaimBuster** (<http://idir.uta.edu/claimbuster>). It has a text mining component that detects factual claims which are worth checking from political discourses such as presidential debates, a social media component that monitors check-worthy tweets and a community component that helps fact-checking enthusiasts discuss and collaborate with each other. This project have received media attention from multiple news outlets, including Austin American Statesman, Poynter and New Scientist. It has also won the Knight Foundation Prototype Fund.

Sustainable Fact-checking [C10, C11, C24]: Sustainability is a major challenge for fact-checking platforms. About one-third of all fact-checking platforms have become inactive after a certain period. The goal of the project is to develop a sustainable model for fact-checking platforms. Towards that goal, we are investigating how fact-checking platforms sustain in adverse conditions and low-resource environment.

Health Misinformation [C9, J1]: Misinformation in health is common and can arise from a variety of sources, including knowledge gaps, intentional manipulation (disinformation), and beliefs based on outdated, incorrect, or insufficient knowledge sources. Misinformation can lead to serious public health consequences, such as vaccine-preventable disease and opioid addiction epidemics. The goal of this project is to design and develop technologies to combat health misinformation.

Significant Fact Monitoring [J3, C32, C33]: Developed an award winning system **FactWatcher**, which helps journalists identify data-backed, attention-seizing facts from ever-growing database. These facts serve as leads to news stories. Demonstration is available at <http://idir.uta.edu/factwatcher>.

- **Social Networks Sensing**

Combating Sexual Harassment [C7, C8, C16]: Tracking sexual harassment is a major challenge. Most systems take a crowdsourcing based approach. It has limitation in terms of credibility and scalability. This project aims at leveraging social media networks to track sexual harassment. It also aims to identify the loopholes in the current social networks in terms of preventing and mitigating sexual harassment.

Social Media Engagement [C12, C20, C17, C18]: The objective of this project is to explore how social media is used as an engagement medium by different entities such as political institutions and media (print, broadcast) organizations.

- **Natural Language Processing**

Sentence Representation [C21]: Sentence embedding is important for many text processing tasks that involve clustering, classifying, or ranking. Recently, distributed representation of sentences learned by neural models from unlabeled data has been shown to outperform the traditional bag-of-words representation. However, Most of the existing representation learning methods consider only the content of a sentence and disregard the relations among sentences in a discourse by and large. The objective of this project is to explore novel models for learning latent representations of sentences that consider the content of a sentence as well as inter-sentence relations.

- **Multi-dimensional Pareto-optimal Analysis**

Skyline Group [C31, J4, C34]: We formulated the novel *Skyline Group* problem. One of its many applications is finding expert groups to complete tasks. Demonstrations on three domains (sports, question-answering, paper review) are available at <http://idir.uta.edu/crewscout>.

Crowdsourcing Pareto-Optimal Objects Finding C29: This is the first study on crowdsourcing Pareto-optimal object finding, which has applications in public opinion collection, group decision making, and information exploration. Departing from prior studies on crowdsourcing skyline and ranking queries, it considers the case where objects do not have explicit attributes and preference relations on objects are strict partial orders. The partial orders are derived by aggregating crowd-sourcers' responses to pairwise comparison questions. The goal is to find all Pareto-optimal objects by the fewest possible questions.

AWARDS, FELLOWSHIPS & SCHOLARSHIPS

1. Sally McDonnell Barksdale Honors College (SMBHC) Faculty Summer Stipend. Spring 2018
2. President's Award for Graduate Poster Presentation. ACES 2016 (out of 40 submissions)
3. Ph.D. Dissertation Fellowship. University of Texas at Arlington. Spring 2016
4. Graduate Fellowship. University of Texas at Arlington. Fall 2015, Spring 2016
5. Outstanding Teaching Assistant Award. University of Texas at Arlington. Spring 2015
6. CIKM 2015 Travel Grant
7. Computation+Journalism Symposium 2015 Travel Grant
8. Excellent Demonstration Award. VLDB 2014 (out of 115 submissions)
9. STEM Fellowship. University of Texas at Arlington. Fall 2010 – present
10. Dean's List Award. Bangladesh University of Engineering & Technology (BUET). 2007 – 2009
11. Computer Science & Engineering Academic Merit Scholarship. BUET. 2007 – 2009
12. University Engineering Scholarship. BUET. 2006 – 2009

PATENT

Classification of Indoor and Outdoor Telecommunications Events of Mobile Telecommunications Networks. Mario Kosseifi, Roswell, GA (US); Mark Austin, Roswell, GA (US); Jeremy Fix, Acworth, GA (US); Naeemul Hassan, Arlington, TX (US); and Sheldon Kent Meredith, Marietta, GA (US). US20140155085 A1. December 4, 2012.

GRANT

1. SaTC: CORE: Medium: Collaborative: BaitBuster 2.0: Keeping Users Away From Clickbait. National Science Foundation (NSF), award of amount \$228,401, 07/01/2020 - 06/30/2024.
2. RAISE: C-Accel Pilot - Track A1: Credible Open Knowledge Network. National Science Foundation (NSF), Subaward of amount \$30,000, 09/09/2019 - 05/31/2020.
3. CHORD: Combating Health-oriented Disinformation. Naeemul Hassan (PI), Kristen Alley Swain. University of Mississippi Big Data Flagship Constellation Seed Grant, \$5,700, 01/22/2019 - 12/15/2019.
4. Undergraduate Research in Data Science. Naeemul Hassan (PI), Dawn Wilkins, Conrad Cunningham, J. Adam Jones, Yixin Chen. University of Mississippi Internal Grant, \$20,450, 06/04/2018 - 08/10/2018.
